BECAUSE OF THE CUSTOMER WE EXIST

Computrack-GPS Tracking System

With the advances in technology our lives become simplified, safer and more comfortable. Now with Computrack your car and your loved ones have never been safer.

Firstech, partners up with Ayantra, Inc. to bring your Computrack which offers you full control of your vehicle via a web browser and cellular phone. If your car is ever stolen you're immediately notified via cell phone and e-mail with the theft message and the car's location. Live Track gives you the ability to follow your vehicle's every move, speed, and location. In addition, you can disable the starter so the engine cannot be restarted.

When you pair the Computrack with a remote start system you can start your vehicle from anywhere you have internet or cellular phone service!

The user interface for the Computrack system is easily accessed through your personal computer. Settings are managed through this personal web interface. You can set perimeters for your vehicle and if it is broken then Computrack will send you an e-mail or text message.

All operations are controlled through a web browser. A detailed map shows your vehicle location and information. You can start and stop live tracking your vehicle, lock and unlock, remote start, and even view history of operations all on this screen.

Features:

Location on Demand
Lock/Unlock Doors
